THE WATFORD UTC

Computing Mini Byte

Did you know…

M&M's chocolate stands for the initials for its inventors Mars and Murrie

Did you know…

One hour before Alexander Graham Bell registered his patent for the telephone in 1876, Elisha Gray patented his design. After years of litigation, the patent went to Bell.

CYBER DISCOVERY—Great Online Opportunity!

We're so excited that WATFORD UTC have been chosen to be part of a programme that will inspire the next generation of cyber security experts and help grow the UK's cyber capable workforce.

Our students are about to immerse themselves into four phases that span hundreds of hours' worth of challenges, tasks and games that have been designed to nurture their interest in the industry. Players tackle everything from Linux to programming, providing them with context of the day-to-day activities of a cyber security professional and introducing them to a wide range of specialisms. So, let's get started!

To sign up—contact Paul or email him on paul.quinn@watfordutc.org

Tim Berners-Lee 1955 in London

In December 1980, Berners-Lee proposed a project based on the concept of hypertext, to facilitate sharing and updating information among researchers. While there, he built a prototype system called Enquire.

The first website built was at http://info.cern.ch/ and was put online on 6 August 1991. The URL is still in use today. It provided an explanation of the worldwide web, how one could own a browser and how to set up a web server. It was also the world's first web directory, since Berners-Lee maintained a list of other websites. Today he continue to work on shaping the future of the web through his work with the World Wide Web Consortium (W3C) and the World Wide Web Foundation.
